This document contains the steps of the small project you are demanded to do prior to your engagement into our company. You are kindly requested to complete these projects, push it to a private GitHub account and share the code with us. In case of any question regarding what you are supposed to do, please do not hesitate to contact me.

**Project Description**

## **VUE FILES MANAGER WITH LARAVEL**

### Private Cloud File Management System

This file system management system should be linked directly with any cloud file system and the data stored there should be uploaded from the system and managed directly on a single page application build using Vue and Laravel framework. You can consider using Cloudinary and their api to make this operations.

- <https://cloudinary.com/>

Here are the main features of the system:

- System Registration System
- Files Preview and Management
- Files Drag and Drop and upload management
- Background Uploading
- File and Folder Searching

An example of a system can be found in the project below:

- <https://vuefilemanager.hi5ve.digital/demo>
